New Products: Featuring Agglomerate Marble

We are proud to introduce our new line of Agglomerate Marbles, now available in four stocked colors in a 24" x 24" tile and 126" x 63" slab option. Often used in mid-century modern design, this playful tile can be used for both commercial and residential projects. However, this timeless marble is versatile enough to take your design anywhere your imagination will take you.

What is Agglomerate Marble?

To appreciate the beauty of agglomerate marble, knowing how it is made enhances its appeal. A natural stone formed within the earth, marble is a metamorphic rock, meaning it changes form. Think caterpillar to butterfly. When limestone, a sedimentary rock, is subjected to extreme heat and pressure over millions of years, it goes through a process of recrystallization which causes calcite crystals within the limestone to grow and fuse together. When this occurs, marble has been created.

Iceberg Agglomerate Marble Slab

That's how marble is formed, but agglomerate marble is a bit different because it is manufactured from marble chips. These chips are tumbled to round their sharp edges, then combined with resin and marble powder, and placed in large rectangular tanks to be cured into a block. Once cured, the block is cut into $\frac{3}{4}$ " or $\frac{1}{2}$ " thick slabs or cut down further into tile.

Given that resin is nonporous, this helps tremendously with durability, whereas standard marble slabs and marble tiles are porous, making them more susceptible to staining and wear and tear if not properly cared for. However, as a product containing natural stone, it is recommended that it be sealed to extend its longevity. Due to its durability agglomerate tile can be used throughout the floor and wall of an entire commercial or residential space. A highly trafficked area is of no concern to this tile, with proper care and maintenance.

ARIZONA TILE

Classico

Classico is a polished agglomerate marble comprised of a white resin background that elegantly displays small, grey marble chips. Upon a closer look, there are some soft hints of beige that may appeal more to a warmer design, while still remaining neutral.

Classico Agglomerate Marble Tile

Iceberg Agglomerate Marble Tile

Similar to Classico and Iceberg, Vector and Regium offer many similarities but provide a more vibrant color palette.

Vector

Vector is a polished agglomerate marble comprised of an off-white background, but where it really differs is in the marble chips. Embedded in this resin are small black, gold, and grey marble chips. This is a timeless way to add some color and playful energy to kitchen and bathroom floors, walls, and more.

Vector Agglomerate Marble Tile

There is value in mentioning that pops of color like this, especially on a floor, can truly make the general appearance a little less stressful throughout the day as tracked in dirt won't be very noticeable. This makes it ideal for both household and commercial settings.

Regium Agglomerate Marble Slab

Regium

Regium offers the same make-up and colors as Vector but with larger marble chips for a bolder design. Add color to your space or even mix and match Vector tile and Regium tile to add movement to the space.

Whether your design is modern or mid-century, or you're choosing to go neutral or bold in your color pallet, there is something for everyone with agglomerate marble. With beautiful and versatile tile and slab options, the possibilities are endless!
